## Project description

Since the introduction of paid parking in 2004, SKIDATA has enabled secure parking at all four campuses utilizing Ulster University's Wide Area Network (WAN) to facilitate both centralized and localized control and monitoring. In 2015, Ulster University issued a European-wide tender through OJEU in order to procure a parking system that could offer a continuation of high performance and reliability as well as to take advantage of new technologies in TCPIP connectivity, chip and pin, and online payments. After undergoing a rigorous technical

tender process, SKIDATA once again was selected as the successful solution provider.

The SKIDATA products were installed to control a wide variety of mobility requirements including public transport, car-pooling, disabled drivers, university security and service vehicles using short-term ticketing, staff and student university cards (Mifare ISO 14443), radio transmitters, and IP intercom solutions.

## Facts and Figures

<b>Customer</b>	Ulster University
<b>Project</b>	4 campuses located throughout Northern Ireland in Belfast, Coleraine, Jordanstown and Derry/L' Derry
<b>Year of first installation</b>	2004
<b>Date of update</b>	09-10/2015
<b>Capacity / size</b>	Approximately 3,500 car parking spaces
<b>SKIDATA products</b>	<ul style="list-style-type: none"><li>• 34 Power.Gates</li><li>• 7 Lite.Gates</li><li>• 38 Barrier.Gates</li><li>• 11 Easy.Cash</li><li>• 3 Manual.Cash</li><li>• 17 Validation.Cash</li></ul>
<b>Solution implemented</b>	Parking.Logic
<b>Realization / special features</b>	<ul style="list-style-type: none"><li>• Color static and video advertising</li><li>• Special promotion voucher facility on Power.Gates</li><li>• Future integration of B2C contract parking to allow online payment of parking contracts</li></ul>
